

COLLABUTE X THEBLOCK HACKATHON, DUBAI, 2026-08-30

We Just Met

Contact capture where the other person
needs nothing.

Devin

Convex

THE PROBLEM

Business cards die.
QR exchange needs **both people in an app.**

✗ **HiHello** needs both people in the system

✗ **Blinq** needs both people in the system

✗ **Popl** needs both people in the system

✗ **Mobilo** needs both people in the system

**Capture wins you the right
to win follow-up.**

Follow-up is where the category dies.

THE WEDGE

One-sided capture.

You hold your phone. They speak name, number, company, topic. A selfie together. **30 seconds later a composed WhatsApp message with the selfie is in their chat.**

Installed nothing

Scanned nothing

Signed up for nothing

The selfie + "the thing we said we'd do" is what restarts the relationship weeks later.

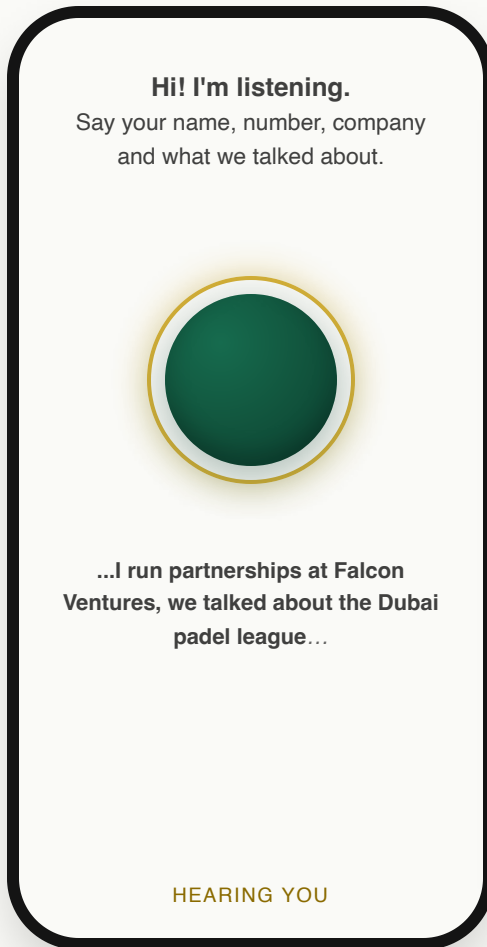

THE 60-SECOND DEMO

Meet. Speak. Selfie. Sent.

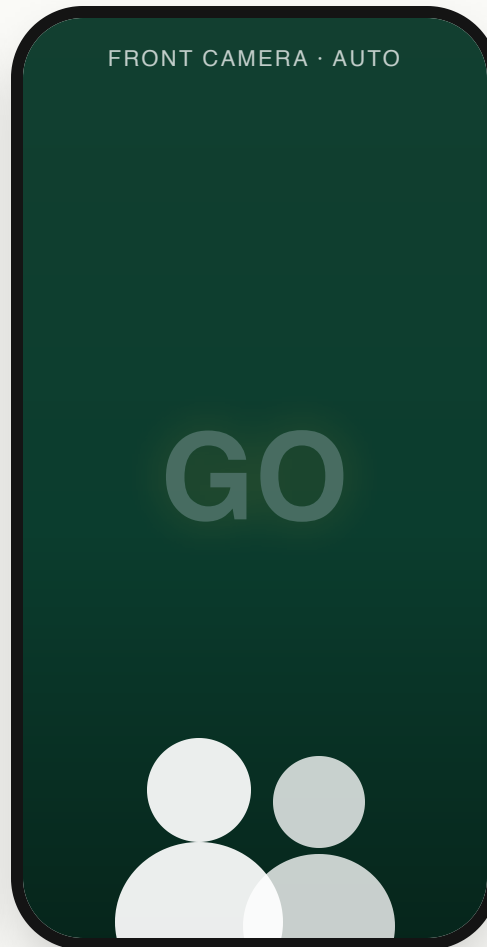

- 1 **Orb listens**, live transcript as they speak
- 2 **"Ready for selfie, 3-2-1-GO"**, auto-selfie fires itself
- 3 **Pre-filled editable Review card**, human safety net
- 4 **One tap**, WhatsApp message with the photo lands in their thread
- 5 **Live web dashboard** row appears, enrichment fills role + LinkedIn URL in real time, **nudge in 48h** countdown chip

THE PRODUCT, LIVE

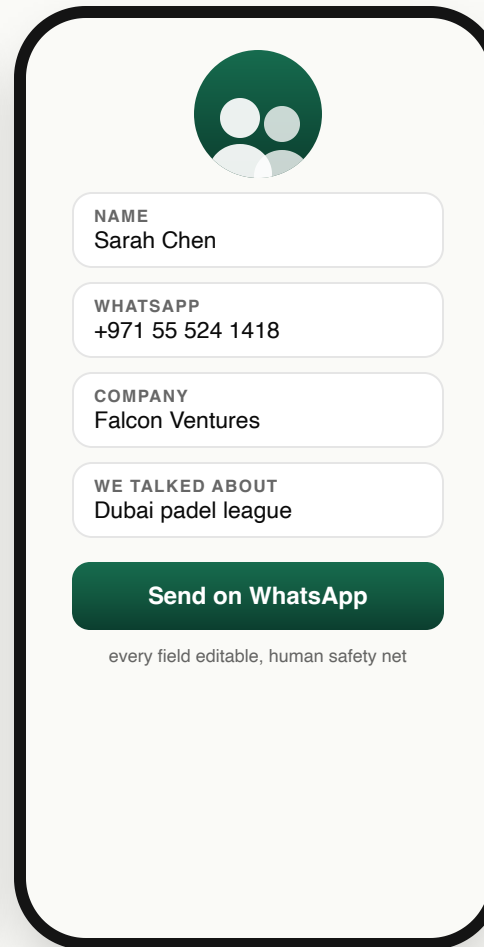

What the phone shows, end to end.

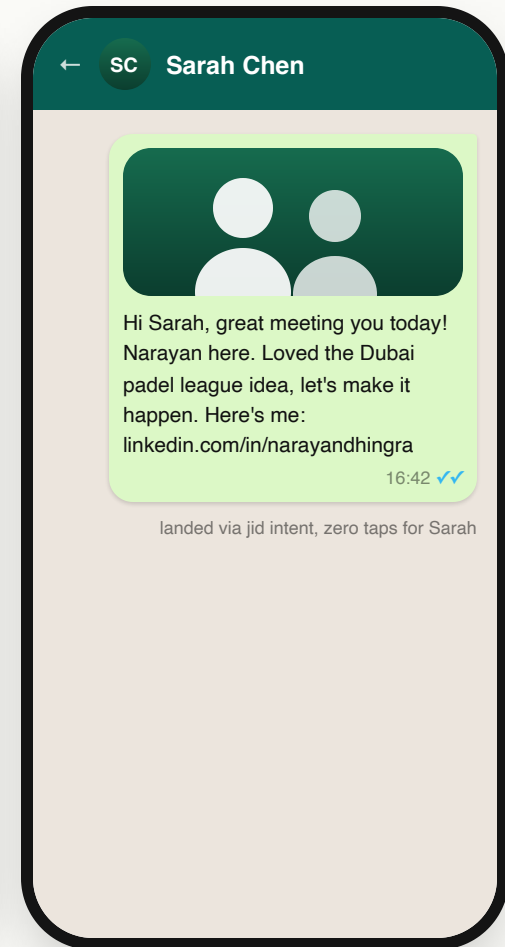

1 · ORB LISTENS

2 · 3-2-1 AUTO-SELFIE

3 · REVIEW CARD

4 · IN THEIR WHATSAPP

THE JUDGE-FACING SURFACE

Live dashboard: every capture lands here in real time.

We Just Met

People you met, enriched and queued for follow-up

LinkedIn

Convex live subscription: no refresh, the row appears the moment the phone saves. Gold-outlined card just landed. Context.dev fills role + LinkedIn seconds later.

PARTNER STACK, ALL THREE LOAD-BEARING

Built on the mandatory stack, for real.

DEVIN

COGNITION

- Entire app built by **Devin CLI sessions** driven from a committed build spec (PLAN.md)
- Planning session + build session running **in parallel**

CONVEX

THE FOLLOW-UP ENGINE

- Contacts table, selfie file storage, **live dashboard subscription**
- Extraction + enrichment actions, **scheduled 48h follow-up** function
- Cloud prod deployment **bright-meadowlark-411**, provisioned via Management API

CONTEXT.DEV

THE ENRICHMENT LAYER

- Two-tier action: **People Enrichment API** first, **Web Search API** fallback targeting linkedin.com/in, role parsed from result title
- **Proven live:** name + company → role + real LinkedIn URL on the dashboard

THE HARD ENGINEERING CALL THAT PAID OFF

Riskiest seam first.

The undocumented WhatsApp **jid** intent extra was tested on a **real device in the first 30 minutes**. Back-to-front build order: prove the send seam, then let everything upstream feed it.

VERDICT

PASSES. Opens directly inside the target chat with image + text staged, one tap from send.

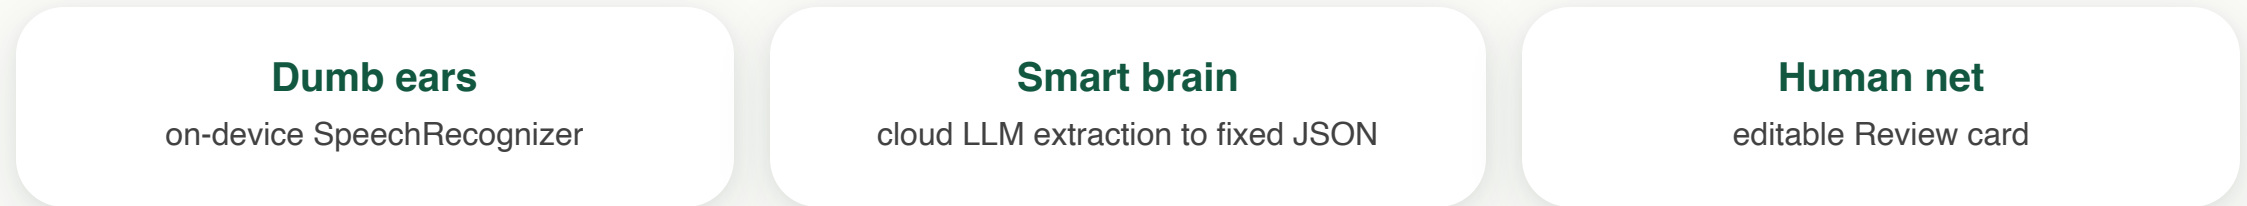

Fallbacks designed but not needed.

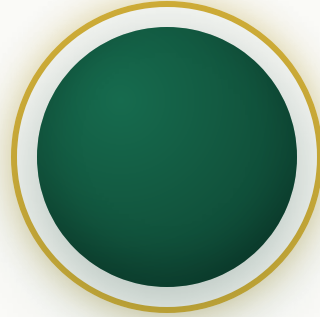

ARCHITECTURE

Simple pieces, one clean seam each.

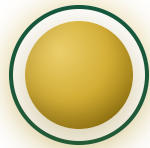

SPEECH STACK

"Now they can't forget you."

WHAT'S NEXT

The orb, reversed: your personal voice agent

Ask it to search the people you've already met: *"Who did I meet at TheBlock who was into padel?"* Same orb, gold side out. Future release, not in this MVP.

LinkedIn auto-connect via [Context.dev](#) browser actions
